

Green PFM II — Feasibility Study

Mission Meeting Notes

Kigali Field Mission — May 4-9, 2026 | Consultant: Yoan Raih

INTERNAL — Not for external circulation

BNR — Monetary Policy Department

Date	2026-05-09
Time	10:00-11:30
Axis	A
Counterpart attendees	Prof. Kasai Ndahiriwe (Director) Joy Irankunda (Economist, NGFS Focal Point) Placide Kwizera (Economist)
Mission team	Yoan Raih (Consultant) Marilou Rouja-Vandenbrouck (Expertise France)

Key Points

- The Monetary Policy Analysis Department combines economic projections (to inform the MPC) and broader research. It has no direct interface with the operational directorate managing monetary instruments — a committee structure manages liquidity, but research/analysis and operations are distinct.
- Climate integration into the macro framework is nascent but underway: the food/agriculture component of inflation models incorporates weather variables (including satellite imagery from the BNR data science team), and every MPC discusses climate risk scenarios. However, forward-looking models are limited to a 1-month horizon, constrained by meteorological agency data availability.
- Different TA received :
 - AFD-ESTEEM model (flood/landslide impact, two-phase mission in June)
 - IMF support to QPM — all
- NISR handles official data publication.
- A BNR Monetary Policy Working Group exists under the Sustainability Steering Committee but is not yet active — explicitly flagged as needing support to become operational. A research concept note on financial stability and climate change has been drafted.
- There is strong appetite for a supported research publication on climate-monetary policy channels, building on the existing concept note. The team has previously published in the BNR Review and sees this as a credible, achievable output.

Open Questions

- What is the exact scope of the June 2026 ESTEEM mission, and is there a coordination role for AFD/Expertise France?
- What is the specific data gap in the BIVA/QPM models that prevents longer-horizon climate projections?
- What would it take to move from the existing concept note to a full published BNR Review paper?

Potential TA Leads

Area	Description	Priority
Climate-augmented forecasting (A1.2)	Support BNR's research team in integrating climate variables beyond weather/agriculture into the QPM, leveraging IMF ESTEEM outputs as a baseline.	HIGH
Green monetary policy instruments review (A1.3)	Assess BNR's existing monetary policy instruments for climate alignment potential; produce a paper on green monetary policy options in the East African context.	HIGH
Research publication support (A1.1)	Support drafting and publication of a BNR Review paper on climate-monetary policy channels, building on the existing concept note.	MEDIUM
MP Working Group activation	Support operationalisation of the Monetary Policy Working Group within BNR's Sustainability Steering Committee — terms of reference, meeting calendar, reporting template.	MEDIUM
