

Green PFM II — Feasibility Study

Mission Meeting Notes

Kigali Field Mission — May 4-9, 2026 | Consultant: Yoan Raih

INTERNAL — Not for external circulation

National Institute of Statistics of Rwanda (NISR)

Date	2026-05-08
Time	09:00-10:30
Axis	Both
Counterpart attendees	David ?? (Project and Planning Coordinator) Sandrine ?? (Head of Relations) Monique ?? (Statistician, Environment)
Mission team	All consultants + AFD + EF

Key Points

- NISR is the institutional focal point for natural capital accounting (NCA) in Rwanda, supported by a WB-funded exercise and EU TA. The current work has laid a definitional/conceptual foundation only — data collection has not yet started. The timeline runs to 2029: identification (2026), collection (2027-2028), alignment (2028-2029).
- A significant climate data gap is confirmed: existing weather data lacks historical depth for statistical modelling, NDC 4 indicators have been identified but their alignment with the NCA framework is unconfirmed, and the Rwanda Forestry Agency data pipeline has no current data.
- NISR has only 9 statisticians working on environment topics. Capacity is stretched. EU TA was definitional only — no TA to actually extract or validate data has been provided.
- The NCA governance structure is incomplete: a Steering Committee co-chaired by MINECOFIN and NISR was designed but has not been constituted due to changes in leadership. This is a prerequisite for progress.
- This meeting confirms the IMF's cross-cutting diagnosis: climate data infrastructure is the binding constraint. Any Phase 2 DLI that depends on climate data (B1.1 forestry MRV, B3.2 ESG Data Hub) must factor in NISR's timeline and capacity ceiling.

Open Questions

- Is the reconstitution of the NCA Steering Committee a NISR/MINECOFIN priority, or is it waiting on political direction?
- Are NISR's NDC 4 indicators formally mapped against the NCA framework? Is any alignment exercise planned?
- What exactly was the scope of the EU TA — was it purely conceptual, with no data collection component?
- How does NISR's 2029 data timeline interact with the IMF FSAP expected post-June 2026?

Potential TA Leads

Area	Description	Priority
------	-------------	----------

Climate data infrastructure mapping	Systematic mapping of climate data gaps across NISR, REMA, and forestry agencies — direct input to B1.1 (forestry MRV) and B3.2 (ESG Data Hub) DLI design.	HIGH
NCA Steering Committee reactivation	Support NISR and MINECOFIN in reconstituting the NCA governance structure and developing a realistic workplan.	MEDIUM
NDC/NCA alignment review	Assess alignment between NDC 4 indicators and the NCA framework; identify harmonisation steps to avoid parallel data collection efforts.	MEDIUM
