

Green PFM II — Feasibility Study

Mission Meeting Notes

Kigali Field Mission — May 4-9, 2026 | Consultant: Yoan Raih

INTERNAL — Not for external circulation

Rwanda Development Bank (BRD) — IREME Invest

Date	2026-05-08
Time	14:00-15:30
Axis	B
Counterpart attendees	Ally Muvundi Rutarindwa (Senior Specialist Green Finance, Business Department) Isaac Rugamba (Resource Mobilisation Department) Agasaro ?? (Gender, Sustainability and Green Financing, RMD) Doris ?? (Resource Mobilisation Department)
Mission team	Yoan Raih (Consultant)

Key Points

- IREME Invest (launched 2023, operational 2024) has a strong approved pipeline — approximately 70bn RWF (~\$50M) across sectors. Sustainable cities are most advanced (70%), followed by smart mobility and energy. Climate-smart agriculture lags due to limited project bankability and a minimum ticket size (\$100k) that excludes smallholder contexts.
- Key bottlenecks: internal capacity for green project screening and MRV remains dependent on external consultants; derisking instruments are insufficient (current concessional rate at 12% — needs to reach single digits); some DFI procurement standards (EU-aligned) are inapplicable to Rwandan SME borrowers.
- Taxonomy transition: IREME currently screens against its own criteria. MINECOFIN is supporting a phased transition to full taxonomy alignment, targeted for 2029. BRD sees this as manageable with TA support.
- On SLB: BRD's SLB programme (150bn RWF programme, ~\$100M raised so far) involves BNR via a collateral/guarantee agreement. A carbon crediting framework with the World Bank is live (clean cooking and mobility pilot, \$19M). An ex-ante assessment report is expected by June 2026.
- IFRS S1/S2 implementation is in its early stages: a task force is in preparation, with the Business Department contributing data and inputs. GHG data collection (e.g., for the hydro sector) still requires external consultant support.

Open Questions

- What is the concrete scope and delivery status of AFD's current EUR 1M TA to IREME?
- What is the IDRIMA boundary relative to IREME — which activities fall under Phase 2 scope vs. existing IDRIMA funding?
- What does BRD need to expand the SLB programme to the full 150bn RWF target?

Potential TA Leads

Area	Description	Priority
Green project screening and MRV capacity	Strengthen IREME's internal capacity for green project screening, ex-ante/ex-post assessment, and MRV reporting to reduce dependency on external consultants.	HIGH
Taxonomy transition support	Support phased alignment of IREME's screening criteria with the national taxonomy, targeting full alignment by 2029 as required by MINECOFIN.	HIGH
Derisking instruments design	Map the gap between current concessional pricing (12%) and bankability threshold; design guarantee and first-loss instruments to bridge it, especially for climate-smart agriculture.	MEDIUM
